

Tonisity PxW WeanBetter

Tonisity PxW WeanBetter is a water-soluble solution for weaned or fattening pigs, to be used as part of the Tonisity Total Programme.

Improve water intake

Improve feed intake

Achieve heavier pigs

Quick Reference

- A follow-on solution, delivered through the normal water lines, especially for weaned pigs that were originally on Tonisity Px in the farrowing stage
- Specifically designed to improve water intake and intestinal function during the weaning transition
- An innovative and palatable combination of amino acids and electrolytes that delivers hydration and appetite stimulation during the weaning transition

What is Tonisity PxW WeanBetter?

Tonisity PxW WeanBetter is a new, concentrated solution that is designed to be administered to weaning-age pigs through ordinary water lines.

What problem does it address?

Weaning can be a stressful time for pigs. If they don't start drinking early, it can lead to weight loss, reduced growth and even mortality. Increased water intake correlates to increased feed intake and Tonisity PxW WeanBetter encourages pigs to drink more during the weaning transition.

Tonisity PxW WeanBetter was carefully formulated to be a complementary product to Tonisity Px. Tonisity PxW WeanBetter works best when used with pigs that were previously exposed to Tonisity Px in farrowing, when they arrive in the nursery or grow/finish barn.

Product Benefits:

on the starter formula of Tonisity Px

Administered through the normal drinking water system

All of these factors will contribute towards pigs drinking more eagerly with greater appetite, which in turn will have a positive impact on their overall health and performance

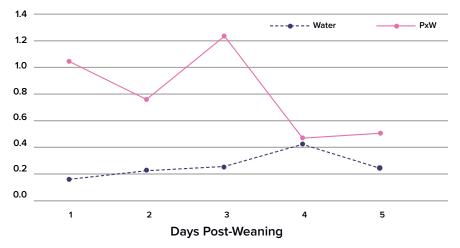

Tonisity PxW WeanBetter

In a recent US trial with 848 pigs weaned at an average weight of 5.9kg, water treated with Tonisity PxW was consumed three times as much as the control over a 5-day period (see Table 1). Those piglets previously received Tonisity Px in the farrowing house. Average daily intake per pig was 0.253 litres in the control group and 0.799 litres in the PxW group. The 5-day cumulative intake of the control group was 1.26 litres and 3.99 litres in the PxW group, representing 4.3% and 13.5% of body weight as water intake respectively. In this trial, it was also observed that 76% of the fall-behind pigs after 21 days post arrival came from the control side.

	Control	PxW	Difference
Average daily intake (L/pig)	.253	.799	3x
5 day cumulative intake per pig (L)	1.26	3.99	
% of body weight as water intake	4.3%	13.5%	

Daily Water Intake (L/Pig)

What is in Tonisity PxW WeanBetter?

Ingredients: Sugars, amino acids, whey protein, electrolytes, prebiotics

The Fun Part:

When Tonisity PxW WeanBetter powder is diluted in water, a light that Tonisity PxW WeanBetter is in

Pigs love the taste of it!
